

**John and Carol Walter Center for Urological Health  
at NorthShore University HealthSystem**

## **Gift Vision**

There existed a tremendous unmet need to provide patients truly integrated, personalized urological care - from the routine to highly advanced - in a setting where patients are true partners in the care process. The John and Carol Walter Center for Urological Health will bring together at NorthShore University HealthSystem (NorthShore) the best and brightest minds in urologic care and research—now and in the future—to achieve the ultimate goal of curing the patient and not just the disease.

Four key programmatic elements come together in the John and Carol Walter Center for Urological Health, creating a truly holistic vision for exceptional urological care and research.

### **Distinctive Patient Care Experience**

Patients will receive personalized care and a wide range of support services, within a dedicated state-of-the-art facility.

### **Patient and Community Outreach Education Programs**

Patients will be offered personalized education throughout their continuum of care; preventive health screenings and community education initiatives for high-risk populations; patient advisory groups and user-friendly multi-media technology to further optimize and enhance their care.

### **Advanced Medical Informatics Technology & Clinical Pathways Research**

NorthShore's nationally recognized electronic medical record system and medical informatics program will be used to create clinical databases, analyze patient outcomes, and establish clinical pathways to improve care and reduce healthcare delivery costs for patients and providers.

### **John and Carol Walter Urologic Research Endowment**

NorthShore clinicians and scientists will receive future endowment grants to conduct innovative clinical trials and translational research projects that show promise of moving from the laboratory to the clinical setting.
